Changelog 21.3.0

Simple and fast task organization with group work baskets

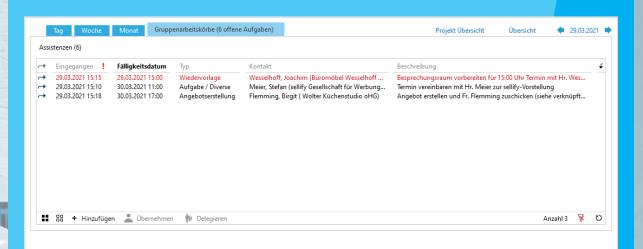

Simple and fast task organization with group work baskets

Optimize your task organization and collaboration!

Starting with sellify version 21.3, you can use the new "group worklist" feature, which supports collaborative work even better and makes task processing from different contact channels faster.

All tasks can be assigned to a specific group worklist first. Tasks in the group worklist can be optionally delegated to responsible employees with a due date or taken over independently by the employees. If the person responsible for the task accepts or rejects it, this is documented in the group worklist.

Keep an overview of all open tasks and their processing status at all times!
